Education

Brandenburg University of Technology (BTU), Cottbus-Senftenberg, Germany **Apr 2025 – Present**

Master of Science in Artificial Intelligence

Coursework: Image Processing & Computer Vision, Neural Networks & Learning Theory, Explainable Machine Learning, Conversational Artificial intelligence (NLP), Statistics, Introduction to Bioinformatics, Data Warehouses, Information Retrieval, Brain-Computer Interfaces (BCIs) for Neuroadaptive Technologies.

National Institute of Technology Puducherry, India **May 2022**

Bachelor of Technology in Computer Science and Engineering

CGPA: 7.73/10

Professional Experience

Publicis Sapient, Bengaluru, India June 2022 – February 2024

Software Development Engineer

- Developed full-stack features for an enterprise assessment platform using Java/Spring Boot, Angular, and PostgreSQL.
- Contributed to authentication microservices and their integration with the platform.
- Supported migration of the platform's PostgreSQL database from existing servers to Azure.
- Designed and implemented REST APIs supporting assessment workflows and frontend integration.

Technical Skills

Programming Languages: Java, C++, Python, JavaScript, LaTeX, Bash, SQL

Databases: PostgreSQL, MySQL, MongoDB

Tools: Git, Docker, AWS, Azure, JMeter, JIRA, Confluence, Elasticsearch

Libraries/Frameworks: ReactJS, Redux, Scikit-learn, pandas, Hugging Face Transformers, Spring Boot, Node.js, Express.js

Projects

Travel Aggregator : Cloud-Native Travel Booking Platform

- Architected and developed 3 independently deployable microservices (Search, Bookings, Payment Gateway) utilizing Spring Boot, Node.js/Koa, and MySQL on AWS RDS.
- Built a responsive React 17 SPA with 20+ routes and complex state management using React Context API, eliminating the need for Redux.
- Engineered an AWS OpenSearch gateway via Spring Boot, implementing RESTful endpoints and frontend DSL queries to serve flights, accommodations, and packages. Designed relational data models with JPA/Hibernate across 5 complex entities.
- Integrated Keycloak for OAuth 2.0/JWT-based authentication and developed a custom Node.js payment gateway supporting OTP generation, MFA, and multi-method payment flows (Credit, UPI, EMI).
- Integrated Google Maps API for real-time geolocation, place autocomplete, and distance/duration calculations for cab bookings.
- Dockerized the full stack, configured automated Jenkins CI/CD pipelines (SonarQube, Cobertura, Cucumber BDD), and performed JMeter load testing to ensure stability for up to 3,000 concurrent users.

GPT-2 Reproduction : Language Model Training Pipeline

- GPT-2 implementation in PyTorch with causal multi-head self-attention, positional embeddings, residual connections, and layer normalization.
- BPE tokenization, next-token prediction, AdamW optimization, learning-rate scheduling, gradient accumulation, and checkpointing.
- Validation loss tracking, HellaSwag benchmarking, and autoregressive text generation with temperature scaling and top-k sampling.

NemoDoc : AI Document Assistant with Agents

- Built a full-stack React/TypeScript and Express application that turns documents into searchable knowledge, cited answers, and study materials.
- Implemented tool-calling agents using the OpenAI Agents SDK, including research planning, parallel researchers, and review workflows.
- Developed document retrieval with source/page citations, citation validation, and server-enforced permissions restricting agents to user-approved sources and tools.
- Added scheduled background tasks, cancellation, execution limits, and persisted run traces for inspecting tool calls, errors, and results.

Certificates

Microsoft Certified: Azure Data Scientist Associate February 2026
AWS Certified Cloud Practitioner September 2022
Deep Learning Specialization (Coursera)
Java Programming (University of Helsinki**)**

Languages

- **English**: C1 - Advanced (Full Professional Proficiency)
- **German:** A2

Interests

- Football (viewing and competing) • Deep Learning Enthusiast
